

User Acceptance Testing Requirements

Purpose

User Acceptance Testing will confirm that the Gig Worker Contract Safety Tracker works as expected and meets the needs of gig workers.

UAT Requirements

1. User Registration and Login

User can create an account.

User can log in successfully.

Incorrect login details are rejected.

2. Contract Upload/Import

User can upload or import a contract.

The system accepts the required file format.

Contract information is extracted correctly.

3. Data Standardisation

- * Information from different sources is converted into the same format.
- * Client names are stored under the same field.
- * Contract amounts and currencies are displayed consistently.
- * Dates follow one standard format.
- * Contract statuses use consistent terms such as Active, Completed, or Cancelled.

4. Contract Tracking

- * User can view their contracts.
- * User can see the client, project, amount, status, and due date.
- * User can identify pending or overdue payments.
- * Information displayed matches the original contract.

5. Dashboard

Contract information is clearly displayed.

Users can easily find important contract details.

Payment and due-date information is easy to understand.

6. Security

Users can only access their own contract information.

User data is protected from unauthorised access.

Third-party account access requires user permission.

Acceptance Criteria

The application will be considered ready when users can successfully add a contract, the required information is correctly extracted and standardised, the information is stored correctly, and the user can view and track the contract from the dashboard.

Test Result

Each requirement will be tested by selected users. Any errors found will be documented and fixed before the final version is accepted.
